REQUEST FOR PROPOSAL (RFP) 212858 – Demonstration of Fuel Cell-Based Auxiliary Power Unit for Refrigerated Trucks

Question 1:

What is the expected duration of the execution phase of the project?

Answer:

The expected duration of the entire project is between 12 and 24 months. It is anticipated that the system design and development, fabrication and installation before demonstration and reporting after demonstration could require the majority of the project time. The RFP requires 400 hours of demonstration time on board the vehicle. If (for example) the fuel cell is operated daily for eight hours or more for deliveries, the demonstration itself may last only a few months.
